### DETAILED ACTION

1. Claims 1-14 have been examined.

#### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Loveland US 7,076,797 B2.

4. As per claims 1, 6, 13 and 14, Loveland teaches a management apparatus in a communication system having an access point to connect electronic devices operated by participants who participate in a conference, comprising:

discriminating means (i.e., determining level of trustworthiness) for discriminating statuses of said participants based on authentication information used by said electronic devices to carry out an authentication procedure [column 9, lines 23-39 and column 10, lines 42-61]; and

restricting means for setting functional restrictions on the electronic devices operated by said participants according to the discrimination by said discriminating means (i.e., providing access based on authenticated level of trust) [column 10, line 43 - column 11, line 22].

5. As per claims 2, 8 and 9, Loveland further teaches the system wherein said electronic devices are connected to said access point by means of Bluetooth (wireless link protocol), and said discriminating means discriminates statuses of said participants based on the PIN code used for authentication between said electronic devices and access point [column 9, lines 22-67 and figure 1B].

6. As per claims 3, 4 and 11, Loveland further teaches the system wherein said discriminating means discriminates the organizer of the conference from participants other than said organizer, and said management apparatus has an operation restriction table for setting restrictions on operations of said organizer and said participants [column 10, lines 42-61].

7. As per claims 5 and 12, Loveland further teaches the system wherein the management apparatus comprises an IP address table creation unit which assigns IP addresses to said electronic devices and at the same time creates an IP address table [column 10, line 55-column 11, line 22].

8. As per claim 7 and 10, Loveland further teaches the system wherein said discriminating means discriminates statuses of said participants based on the authentication procedure and authentication information used for carrying out the authentication procedure and discriminates functional restrictions based on said statuses [column 9, lines 35-67].
